

AKS16-MT

Absolute Multi-Turn Magnetic Sensing Head

Combining AKS16-MT and BOGEN rotary scales offer cost-efficient absolute magnetic measurement solutions for many industrial applications where movements have to be measured. AKS16-MT is the perfect fit for rotary and radial measurements up to 59mm in diameter. The encoder provides both BISS-C or SSI outputs. This hollow shaft encoder's resolution of 19 to 20 bits exceeds typical shaft end applications many times over. AKS16-MT is very compact in size and fits assembly even in confined spaces. An external battery power supply ensures that manual movements of the scale are still detected and position data is counted even when the system voltage has been switched off.

- follow standard ESD precautions!
- turn power off before connecting the sensor.
- do not touch the electrical pins without static protection such as a grounded wrist strap

Calibration / Programming

Each unit needs to be calibrated in final assembly with a nonius scale. For the calibration, the scale needs to be moved over the whole measuring length. For the use of the multi-turn function several parameters have to be programmed (e. g. pole pitch, number of master pole pairs etc.). For calibration and programming, the programming unit including cables and the BOGEN software will be needed. A PC is required for calibration and programming. The use of non-BOGEN approved software may result in reduced performance of the encoder!
